The screenshot shows the QGIS 2.4.0 interface. The top toolbar contains various icons for file operations, navigation, and editing. The main window is divided into several panels: a top toolbar, a left sidebar with tool icons, a central canvas area, and a bottom status bar. The 'Layer' panel is active, showing a list of layers. The 'Browser' panel is also visible, showing the file system structure. A dialog box titled 'Quelltyp' is open, allowing the user to select a data source type and file encoding. The 'Datei' radio button is selected, and the encoding is set to 'UTF-8'. The 'Quelle' section has an empty text field for the data source path and a 'Durchsuchen' button. The 'Open' button is highlighted in blue.
