February 16, 2012: Start-up Presentation for Stories through Music for Adolescent/Young Adult Resilience during Treatment & Parents

RESPECT faculty members Dr. Sheri Robb, PhD, MT-BC and Dr. Joan Haase RN, PhD, FAAN will make a short presentation on Stories through Music for Adolescent/Young Adult Resilience during Treatment & Parents (SMART II), a multi-site trial, recently dually funded through the National Institutes of Health/National Cancer Center and Children's Oncology Group will take place on Thursday, February 16, from 8:30 – 9:00am in the Ruth Lilly Auditorium, located in the Riley Outpatient Center.

The SMART II study builds on outcomes from a previous multi-site R01 study which examined efficacy of a Therapeutic Music Video Intervention for Adolescents/Young Adults receiving a stem cell transplant for cancer to improve outcomes related to resilience and quality of life. This second study expands the study to all adolescents with high risk cancer and will examine the addition of a parent support intervention to provide further benefit for AYA, while also addressing parent needs. The presentation will include introductions to members of the study team, a summary of outcomes from the first study, and provide an overview of the SMART II study. Visitors are welcome.
